2. Based on this Use Case model:
 - a. What is the system being modelled?
 - b. Who are the actors?
 - c. How many customers can be involved in the use case?
 - d. How many credit card companies can be involved in the use case?
 - e. What is included in buying and selling goods by auction?
 - f. What is included in buying items on auction?
 - g. What are the use cases?

1. .

1. Summary: High level design that you might show to someone that is just starting the project or to an exec.
2. User-goal: Breaking down into people who will be using it. Done by one person at a time, achieves one goal but very well.
3. Subfunction: Things that are shared by all, no clear primary actor, provides support for user-goals

2. .

1. An auction system
2. Customer and Credit card company
3. 0 or more
4. 0 or more
5. Enroll, Transfer Credit, Buy item on auction, sell item by auction, Identify
6. Search for auction item and close auction
7. Buy and sell goods by auction, Identify, Enroll, Transfer credits, buy item on auction, sell item by auction, search for auction item, close auction
